

January Bulletin 2016

SSOS GENERAL MEETING

MINUTES - 14 DECEMBER 2015

Frank Daniel, our President extended a welcome to our members and guests, Daniel Coulton motioned that our November meeting minutes which were distributed through the Bulletin, either by mail or email, be accepted as accurate. Carried.

Correspondence received

- Newsletters from OSNSW, Eastern Suburbs, North Shore Eurobodalla Orchid Club and Bankstown Orchid societies
- Australian Orchid Council minutes from AGM and the Board of Management meeting
- Apology for the Christmas party from our show judges, Irene Bodell, Garrie Bromley, Peter and Jane D'Olier, Veronica Clowes, Trish Peterson, Nick Gill.
- 2016 orchid show dates from Eurobodalla Orchid Society

New Members - Nil

TONIGHT: Annual awards night, Christmas Party and judging of the growing competition

JANUARY meeting: Seedling competition presented by Daniel Coulton; & Jan Robinson will talk about entering orchids into the Royal Easter Show.

FEBRUARY: Richard Dimon on Genetic modifications of orchids

MARCH: AGM

ITEMS OF INTEREST

- Just a reminder that all members who pay their membership fees by the close of the January 2016 meeting are in the ballot to win the subscription to the Orchids Australia magazine.
- As December is the start of the award period for our Society, the new plant class to commence this month is Class 10B Oncidiinae Species. George put a scale on the Class labels for members to measure their blooms against so that

Events

- **January Meeting** will be our annual seedling competition presented by Daniel Coulton on the 12th.
- **Winter show** 18 – 21 June 2015

President: Frank Daniel

Secretary: Rhonda Jackson

Treasurer: Jan Robinson

Editor: Dan Coulton

djc388@uowmail.edu.au

you know that you are exhibiting in the correct class. If your plant is a species plant, it is exhibited in the species class first.

- Due to the postage and photocopying costs, and the effort involved with photocopying and posting the bulletin to members, for those of you who have an email address and receive the bulletin in the mail, would you please provide your email address to the Rhonda or Jan Robinson?
- When Myra Chalmers passed away, people were asked to make a donation to the St George Sutherland Parkinsons Support Group instead of buying flowers. The committee agreed to make a \$50 contribution to the Parkinsons Group in honour of Myra.
- The Society presented Colm O'Leary of Swanes with a hamper in appreciation for holding our 2015 Winter and Spring shows at the nursery.
- Colm O'Leary has advised the Society that due to a restructure in Swanes business the nursery will not be in a position to hold the future shows for the Society. The committee sought alternative locations and only found one suitable venue being Kareela Golf Club. It costs \$220 per day for a room and they supply the tables and have the sign on the highway we could use to advertise. Food and alcohol is available and the room can be secured at night. The Club opens on Thursday & Friday at 10am, Saturday & Sunday at 9.30am, however earlier access would be available to us. There should be plenty of parking. Our 2016 shows will be held at the Kareela Golf Club on 16 - 19 June & 8 - 11 September 2016 (set up will be on Thursday). The Orchid Tray Company will have a table and sell products and Swanes may have a table as well.

ELEVATION OF HIGH POINT SCORERS

The committee considered the elevation of members to higher classes based on their annual points score and approved the elevation of Cheryl Matheson with 81 points from Novice to Intermediate class.

ANNUAL PRESENTATIONS

Our President thanked the following:

- our committee who have work very hard in managing the business of the Society. There is a lot of work that is done by the committee behind the scenes that members may not appreciate.
- the members who have worked tirelessly over the year such as our judges, raffle ticket sellers, sales table assistants and those people who put out and put away the tables at our meetings.
- Heath Myers and Jenny Sharpham for managing the growing competition.
- George Birss for holding the growers group sessions
- those who brought a gift for our Giant Raffle tonight
- Madge and Karen Errington, and Cheryl Matheson for organising of our suppers at our meetings.
- Daniel Coulton for his efforts with publishing the Society's bulletin.
- Pam Davies for her efforts in tallying the monthly show bench results from which the annual point scores are calculated and taking the photographs at the monthly meetings.

NAME BADGE DRAW – Judy Ettrick

LUCKY PLANTS – to be drawn in February 2016

Seedling Competition - George Birss was first in the Open Class and Trevor Haney first in the Intermediate/Novice class.

Bulletin Article winner of the \$50 Bunnings voucher - Gary Hodder

ANNUAL POINT SCORE CERTIFICATE & TROPHY PRESENTATION

The winner of the **Rona Goudie Trophy** for 2015 is Wayne McEvoy who gained the most 'first places' in our 3 shows (Winter, Spring & Spectacular) but failed to win a Champion Prize.

The winner of the **Annual Point Score Trophy** for 2015 is Sandra Crosby and Tony Costa who achieved an outstanding 678 points.

Christmas Party

Our members and guests adjourned to the hall for the Xmas Party where people had some food and plenty of opportunities to win a raffle prize.

Next meeting: 11 January 2016

GROWERS MEETING

We have re named the "Novice Group" to "**GROWER'S MEETING**". We found that those attending were not necessarily all novices but members who just wanted to know more and learn from others to improve their growing techniques.

The process of this meeting is bring along plants with problems or you don't know what to do to improve it's growth or bring questions on all aspects of growing, showing, re potting or whatever and we as a group will suggest, show or assist in fixing your needs.

This next meeting is FEBURARY 13th 2016 at George's place. 1pm start.

Remember this meeting is open to all members and we would appreciate some experienced growers to assist with their knowledge.

GROWING COMPETITION – December 2015

This was our third showing for our growing competition plant, *Zygopetalum*. For those who have forgot, to be eligible you must show your plant five of the possible ten showing sessions, so if your keeping it as a surprise and haven't yet shown it next time (March) is the time for the big reveal. Remember this is not a mine is better than yours it is a periodical showing of how different growers can grow. For those who think they are not succeeding, bring your plant along and ask how you can improve.

This month's winners as selected by our judges Gary Hodder and Diane Phillips were-

Novice / Intermediate Class

1. Trevor Haney - I think this is Trevor's third win, must be doing something right, maybe we can get him to talk about his growing regime at a future meeting. He seems to be doing well at monthly benching also.
2. Jenny Sharpham
3. Karen Errington – is Madge giving tips???

Open Class

1. George Birss
2. Heath Myers
3. Heath Myers – Heath has now re potted. He has one plant growing in a "magic mix" and one plant growing hydroponically. With the new growth this month just what is in the "magic mix"? Maybe Heath can give some growing tip also.

March 2016 is our next showing so look around your green house for your "growing competition" plant and bring it along, the more plants on display encourages the Committee to have more things like this for members to get involved in.

IN MY GREEN HOUSE – January 2016

Well Christmas is over and my belly is full, too much ham, pork and those dreaded nibbles, time to get back in the water, for me. Over the festive period I kept the water up to my orchids that was the easy part, now to get back to fattening them up. Water, fertiliser, bug spray and re - pot, time to get to work. I just went for a walk through my green house and had a good look around to find things to write about for this article. Thank heavens orchids live on neglect, I may have to neglect them more often because they all seem to have flourished over the festive season or Santa's helpers paid some unexpected visits! The first orchids I came to are my soft canes, growing in the open, outside my shade house in full sun. New growths popping up in every pot but on closer inspection on some of the leaves there are skeleton patches, green grubs have been at work, tomorrow I'll spray, supposed to be cooler. President Frank called around a few days ago and said his sarcochilus had been attacked, I should have taken the hint and checked then, "dam that festive spiri"t".

Now the good bits, my bulbophylums are throwing new growths all over the place and appear to be multiplying before my eyes, "joy to the world". My Coelogyne are sprouting nice fleshy new leaves and the pseudobulbs are fattening up nicely also and my Laelias are all showing new growth.

As I walk around I am surrounded by quite a few Oncidinae all in flower with nice long inflorescence covered in tiny yellow and brown flowers, so many flowers and no show to go too. Just noticed two stenoglottis, now up to flowering size. These are deciduous orchids that start to produce leaves in Spring. Stenoglottis fimbriata is still only in leaf, but for this plant the leaf is as nice as the flower. As it grows the green leaf is covered in red / brown spots and looks amazing, looks pretty good when it does flower with inflorescence about 20cm high covered in pretty pink flowers, but for some reason when it flowers the spots disappear from the leaves. Maybe somebody can tell me "why is it so". Stenoglottis woodii has green leaves and the short, 10cm inflorescence carry 20 – 40 pretty little white flowers with many little pink spots.

Spanhopia orchids, those highly scented orchids that flower at Christmas time, for most, pop out the bottom of the basket and are usually smelt before being seen, for me are late this year, now in January and just showing the first signs of spikes. I'll blame it on "El Nino".

One thing that can be still done while it is still too hot, besides keeping up the fluids, to your orchids, that is. Is to check your equipment. Spray bottles and pump sprayers will all be needed very shortly to attack those nasties. A good idea is to regularly pull your sprayers apart and check filters and sieves. The two that are often forgotten are the one at the bottom of your bottle. At the end there is usually a little mesh filter that blocks with the gunk in the bottom of the bottle and the other is a small mesh filter in the spray head. Undo the spray nozzle and you should find a little wire sieve type filter this is very fine and is meant to catch the very fine gunk (what a great word, gunk)before it gets to the spray nozzle. When doing these tasks, BE CAREFUL , not to lose little bits and put back together the correct way. If you end up with "bits" left over, you've done something wrong not been thrifty.

You Grew It

Angraecum Magdalenae - grown by Wayne McEvoy

Often referred to as the "Snow white angraecum" or the "Queen of angraecum". There are over 200 species of Angraecum that originate in the Africans. Angraecum Magdalenae is found in Central Madagascar growing at elevations of 800 – 1200m mainly as a lithophytic monopodial species.

Lithophytic meaning rock growing and monopodial meaning growing from a single point, like a vanda. In the mountain area where it grows it is cool with good light and air movement and has a distinct dry period through it's Winter.

The plant has a vanda type shape in that the leaves alternate to each side and as the plant matures will produce "keikes" which will bloom. The plant produces 1 – 5 flowers that are a fleshy crisp large white flower around 7 -10cm with a 10cm "S" shaped spur that last 4 -8 weeks.

This orchid is well suited to a wooden basket or shallow pot. The mix should be quick draining, scoria, charcoal and tree fern fibre are suggestions as this orchid sulks with re potting.

I can grow and flower this orchid in my green house at Engadine without too much trouble. It is magnificent but alas between shows for me, but I'll enjoy. Angraecum are not that hard to grow, require little caring and the rewards are great, have a go at one.

Dendrobium Fleckeri – grown by George

This wonderfully coloured orchid is found in the rainforests of North Queensland, near mountain tops at elevations of 800 – 1500m where it is cool, cloudy with mists and fogs. An epiphyte, commonly referred to as the "Apricot Orchid", due to the colour of the sepals and petals.

Grown in pots with well drained mix or mounted. Given a cool, dryer winter will encourage flowering. The pseudobulbs carry 2 -3 leaves at the end develop 1 – 3 spicy, musky fragrant flowers, thick in texture, that are apricot in colour with a labellum covered in fine white hairs. Easily propagated from keikes, not a big grower, but rewarding when in flower, if you are able to obtain a piece. Grow in a shade house in the Shire.

Maxillaria Tenuifolia – grown by Lee Buivids

Tenuifolia is one of those Species plants that belong in every collection, if not because you grow Maxillarias but just for the pleasant, coconut smell of the flowers, which often is noticed before the flower is seen, as the flower is displayed in the grass like foliage. A single flower of about 5cm will emerge from the base of the pseudobulb. Flowers vary from a pale red to a deep red / crimson with cream spots towards the centre. The lip is a cream with dark red to crimson spots.

Unique with this plant is the way the pseudobulbs grow on top of each other. This looks like one growth with pseudobulbs along the growth but actually each pseudobulb has roots that grow under the papery coating. Propagation is as simple as removing a single pseudobulb and potting up in spag. Or mounting and watching it grow. This compact plant can

be kept compact by taking cuttings or let grown in to a specimen plant that will produce a wonderful display.

Tenuifolia is easily grown in a shade house in Sydney, given ample water to fatted the pseudobulbs, with plenty of light and air movement, has few pest problems. I grow mine hanging high in my shade house. A 200mm pot full can be maintained to a height of about 30cm and will give a great display weather you show it or just take inside when flowering to enjoy the aroma as you pass by.
